Advanced AI Image Generation Prompts

A comprehensive collection of detailed, professional-grade prompts for creating hyper-realistic renders, product photography, character design, and complex visual compositions using modern AI image generation tools.

Bioluminescent Terrarium Scene

A hyper-realistic, macro-cinematic shot of an ornate, geometric glass terrarium sitting on a dark wooden table in a dimly lit, atmospheric alchemist's study. Inside the glass structure grows a cluster of bioluminescent alien flora, pulsing with vibrant cyan, soft violet, and electric pink light. The plants have intricate, coral-like textures that shimmer from within. Tiny, glowing embers and crystalline dust particles float inside the glass. The surrounding environment is filled with soft-focus antique books and jars of glowing minerals. The lighting is dramatic, with the primary light source coming from the plants themselves, casting a magical glow and sharp reflections on the faceted glass and brass frame. 8k resolution, Unreal Engine 5 render style, intricate textures, and shallow depth of field.

Product Photography: MONDAY RESET Shampoo

Create a photorealistic studio product shot of a 250 ml amber glass bottle with a matte white label.

Label brand name (top, centred, bold): "MONDAY RESET"

Subheading (smaller): "Caffeine Shampoo"

Body text (exact, readable, no typos):

"Clean rinse. Light citrus. For daily use."

Ingredients block (small but readable, left aligned):

"Aqua, Sodium Laureth Sulfate, Cocamidopropyl Betaine, Glycerin, Citric Acid, Sodium Benzoate."

Bottom line (tiny, but readable): "250 ml • Made in the UK"

Lighting: softbox left + rim light right. Background: light grey seamless paper.

Camera: 85 mm lens look, shallow depth of field, sharp label focus, realistic reflections.

Constraints: no extra words, no watermark, no logo marks.

London Street Scene with Bus Advertisement

Photoreal street scene in central London on a winter weekday at 17:30.

Hundreds of people in coats, natural faces at small scale (no blurred masks), realistic motion.

A red double-decker bus passing with an advert that reads exactly:

"GPT Image 1.5"

Smaller line under it: "Faster edits. Better text."

Everything in focus, documentary photo style, mild film grain.

Constraints: readable bus text, no extra signage text, no watermark.

THE PROFESSOR AI Mug: Multi-Scene Product Series

Create a clean ecommerce packshot on a white background:

A minimalist ceramic mug, colour: deep navy, with simple text printed:

"THE PROFESSOR AI"

Text must be centred, crisp, no spelling changes.

Soft shadow under the mug, studio lighting, 3/4 angle.

Constraints: no extra graphics, no watermark.

Executive Desk Scene

Edit: place the same mug on a tidy executive desk with a laptop and notebook. Preserve the mug text exactly, same font and placement. Keep lighting believable.

Podcast Studio Scene

Edit: place the same mug in a podcast studio scene with a microphone arm. Preserve the mug text exactly. Keep camera angle similar.

Train Table Scene

Edit: place the same mug in a train-table scene (UK rail), morning light. Preserve the mug text exactly. No extra text in the scene.

Object Removal Edit

In this photo, remove ONLY the coffee cup.

Preserve table texture, shadows, lighting direction, and every other object.

Photoreal, no blur patches, natural contact shadows.

Comic Panel Series: British Lecturer Character

Panel 1: Office Doorway

Create panel 1 of a 4-panel comic, clean ink + flat colour style.

Main character: a middle-aged British lecturer, round glasses, navy jumper, carrying a laptop.

Scene: office doorway with a sticky note that reads exactly "MEETING IN 5".

No other text.

Panel 2: Laptop Screen

Continue the comic with the SAME character design and colours.

New scene: the lecturer opens the laptop and the screen shows a simple icon of a robot (no words).

Constraints: do not redesign the character. No text.

SaaS Dashboard UI Mock-up

Create a high-resolution mock-up of a SaaS analytics dashboard on a laptop screen.

UI style: modern, minimal, light theme.

Readable headings (exact):

- Top left: "Operations Overview"
- Cards: "Revenue", "Cost", "Pipeline", "Support Tickets"
- A line chart titled "Weekly Trend" with simple axis labels "Mon Tue Wed Thu Fri".

Constraints: keep all text readable, aligned, no watermark, no extra labels.

Note: this is a visual mock-up, not real data.

Icon Set for AI Productivity Toolkit

Create 12 simple, consistent outline icons for an AI productivity toolkit:

calendar, inbox, checklist, document, chart, microphone, camera, lightning bolt, shield, robot, pencil, folder.

Style: 2 px black stroke, rounded corners, no fill.

Output: transparent background, each icon centred with equal padding.

Constraints: no text, no watermark.

Wristwatch Time Display

create a picture of a wristwatch showing the time of 7:20

3D Bobblehead Figurine Series

Standard Bobblehead Design

Use the uploaded photo as the identity reference. Create a 3D bobblehead figurine of the same person with a friendly caricature style: oversized head (about 2.2× normal head proportion), smaller body, accurate facial structure and skin tone, same hairstyle and facial hair as the photo, same expression vibe.

Outfit: smart casual (white shirt, dark trousers, simple shoes), hands resting at the waist like a confident pose.

Materials: painted resin vinyl toy look, subtle surface texture, realistic eye highlights, clean edges, high detail around eyebrows, hair strands, and smile lines.

Figurine stands on a round matte black display base. Background is a smooth mid grey studio sweep.

Lighting: soft key light from upper left, gentle fill from right, soft shadow under the base, product photography look, sharp focus, no motion blur.

Composition: centred, full figurine visible, 1:1 square image.

Constraints: no text, no logos, no watermark, no extra people, no extra props, no busy background.

Museum Display Case Version

Using the uploaded photo as identity reference, generate a 3D collectible bobblehead version of the person: big head, small body, accurate likeness, expressive but not cartoon extreme.

Put the figurine inside a clear acrylic display case (museum style) sitting on a matte black plinth. Add a tiny silver serial plate on the plinth but leave it blank (no writing).

Studio background: neutral grey. Lighting: softbox left plus rim light right, crisp reflections on acrylic, clean product shot.

Constraints: no readable text anywhere, no watermark, no brand marks.

Corporate Professional Version

Turn the uploaded photo into a 3D bobblehead figurine of the same person, keeping facial likeness and hair.

Outfit: dark suit, open collar (no tie). Pose: one hand holding a slim laptop, the other hand pointing down at a tiny dashboard chart printed as a simple coloured shape with no numbers or words.

Base: round black stand. Background: soft grey gradient. Lighting: corporate headshot style, sharp and clean.

Constraints: no text, no logos, no watermark.

Retro 1960s Nodder Style

Create a retro bobblehead doll inspired by 1960s collectible nodders: slightly simplified paint, mild paper mâché texture, oversized head, spring neck hinted at subtly.

Keep the person's likeness from the uploaded photo (face shape, hairline, facial hair), but with a vintage toy finish.

Neutral studio background, centred, full figurine.

Constraints: no text, no watermark, no additional characters.

Photo Retouching and Reaction Image Set

Professional Photo Retouching Guidelines

Use the uploaded photo as the identity and geometry reference. Keep the same person, facial structure, age, skin tone, hairstyle, facial hair, glasses (if present), and expression. Do not beautify, stylise, or change ethnicity.

Retouch only to improve realism and clarity: correct white balance, even out exposure, lift shadows slightly, reduce harsh highlights, and remove colour cast. Keep natural skin texture (do not airbrush). Reduce noise and add mild sharpening to eyes and hair while avoiding halos.

Replace the background with a plain, seamless light grey studio backdrop with soft falloff. Preserve accurate edge detail around hair and glasses.

Keep the original framing and perspective unless needed to centre the subject slightly.

Remove distractions (stray hairs across face, lint, blemishes that look temporary), but keep defining features (moles, wrinkles, scars).

Output a photoreal result with soft studio lighting and natural contrast. No text, no logos, no watermark.

Reaction Image Set

use this picture as the reference and now produce a full set of reaction images

Cinematic and Artistic Compositions

Noir Detective Scene

A low-angle "Dutch angle" shot of a detective standing in a rain-slicked alleyway. Use "Chiaroscuro" lighting with a sharp rim light from a flickering green neon sign. The mood is Noir, moody, and dramatic, with heavy fog rolling across the ground.

Isometric Tech Diagram

An isometric 3D exploded view diagram of a futuristic smartwatch. Clearly label the components: "Quantum Battery," "Holographic Projector," and "Neural Sensor" with clean lines and legible text. Use a clean, tech-inspired blue and white color palette.

Minimalist Movie Poster

A minimalist movie poster with a matte black background. In the center, a 3D glass sculpture of a heart. Below the heart, the title "FRAGILE" is rendered in bold, elegant gold serif typography with perfect kerning. The text must be sharp and integrated into the lighting of the scene.

Mechanical Butterfly Macro

An extreme macro shot of a mechanical butterfly landing on a dew-covered mossy rock. Every gear and copper wire inside the butterfly's translucent wings is visible. 4K resolution, shallow depth of field, focused intensely on the iridescent eye of the butterfly

Futuristic Portrait

A hyper-realistic close-up portrait of a young woman with neon-blue braided hair and silver geometric face paint. She is wearing a translucent holographic raincoat. Consistent character: maintain this exact facial structure and hair color in a futuristic Tokyo street setting at night with puddle reflections.

Mediterranean Villa

An ultra-modern villa built into a Mediterranean cliffside. Follow-up edit: Now, change the time of day to twilight, add warm glowing lights inside the floor-to-ceiling windows, and place a white infinity pool on the balcony that seems to blend into the ocean.

Luxury Perfume Bottle

A sleek, luxury perfume bottle labeled "STARDUST" in a clean sans-serif font. The bottle is made of obsidian glass and is floating inside a nebula of purple and gold cosmic dust. The liquid inside the bottle glows with a faint bioluminescence.
