

# ChatGPT 5.2 – Practical Prompt Pack

Focus: Real outputs, business use, fewer errors

Recommended mode: Thinking

# PROMPT 1: Single-file interactive app (HTML)

## The Prompt

Create a single page app in a single HTML file.

### Requirements:

- Name: Ocean Wave Simulation
- Goal: Display realistic animated ocean waves
- Controls: wind speed, wave height, lighting
- Visual style: calm, realistic, minimal UI
- All logic and styling must be contained within one HTML file

**Output instruction:** Output only the complete HTML file and nothing else.

# PROMPT 2: Workforce planning spreadsheet

Build a 12 month workforce planning model for a UK based technology company.

**Engineering**

**Sales**

**Marketing**

**Legal**

## For each department include:

- Starting headcount
- Monthly hires
- Monthly attrition percentage
- Average salary
- Employer National Insurance estimate
- Total monthly cost

## Add:

- A summary table showing total headcount and cost by month
- Clearly stated assumptions
- Internal consistency checks that flag impossible values

Present the output as a clean spreadsheet-style table suitable for export to Excel.

# PROMPT 3: Business dashboard using Canvas

Using Canvas, create an interactive business dashboard based on a workforce planning model.

## Requirements:

### Interactive Controls

Controls to increase or decrease hires by department

### Live Updates

Live update of monthly and annual cost

### Cost Breakdown

Cost breakdown by department

### Clear Summary

Clear summary showing total annual wage cost

## Design:

- Clean, professional layout
- Suitable for senior leadership review
- No unnecessary visual clutter

# PROMPT 4: Long-document reasoning

I am uploading a long document.

## Your tasks:

01

### Identify Key Decisions

Identify the ten most important decisions a senior leader would need to make based on this document

02

### Cite Sources

For each decision, cite the exact page number and section heading used

03

### Find Contradictions

Identify any contradictions or tensions between sections

04

### Executive Briefing

Produce a one page executive briefing summarising implications and options

**Important:** If any information is missing, explicitly state "not found in document".

# PROMPT 5: Hallucination and citation test

Provide the exact academic citation where Albert Einstein first used the phrase "black hole", including paper title, year, journal, and page number.

**If this citation does not exist:**

## Explain Why

Explain clearly why it does not exist

## Find the Origin

Identify the earliest verifiable origin of the term

## Provide Reference

Provide a credible reference with page number

# Why These Prompts Matter

## Real Outputs

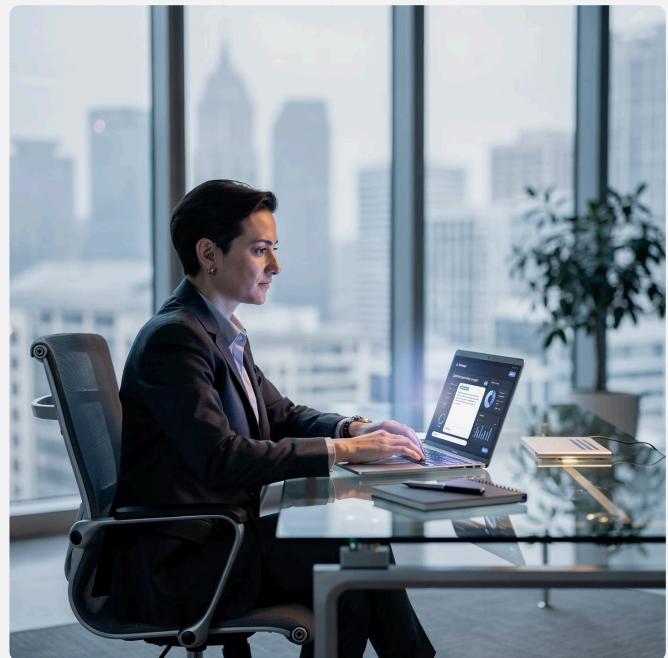

These prompts are designed to generate practical, usable results that you can implement immediately in your business workflows. No theoretical exercises – just actionable outputs.

## Business Use

Each prompt addresses common business needs: building tools, planning resources, creating dashboards, analysing documents, and verifying information accuracy.

## Fewer Errors

By using structured requirements and explicit instructions, these prompts minimise hallucinations and ensure ChatGPT provides reliable, verifiable information.

# Getting Started with the Prompt Pack

## Watch the Video

Start by watching the accompanying video tutorial to understand the context and best practices for each prompt.

## Copy the Prompts

Copy each prompt exactly as written. The specific wording has been tested to produce optimal results.

## Set Thinking Mode

Remember to use **Thinking mode** in ChatGPT for best results with these prompts.

## Customise and Deploy

Adapt the prompts to your specific needs whilst maintaining the core structure and requirements.

# Tips for Maximum Effectiveness

## Be Specific with Requirements

Notice how each prompt includes detailed requirements. The more specific you are, the better the output. Don't leave room for ambiguity.

## Request Single-file Outputs

When building tools or apps, requesting everything in a single file makes implementation much easier and reduces errors.

## Include Validation Steps

Like the workforce planning prompt's "consistency checks", always ask ChatGPT to validate its own outputs against your requirements.

## Test for Hallucinations

Use prompts like #5 to verify that ChatGPT can admit when it doesn't know something rather than making up information.

## Specify Output Format

Always tell ChatGPT exactly how you want the output formatted – whether it's HTML only, a spreadsheet table, or a one-page briefing.

# Ready to Transform Your Workflow

This prompt pack gives you **five battle-tested prompts** that deliver real business value.

From building interactive tools to analysing complex documents, these prompts help you get **reliable, accurate results** from ChatGPT 5.2.

Start with the video tutorial, then experiment with each prompt. Adapt them to your specific needs, but keep the core structure that makes them effective.

**Remember:** Use Thinking mode for best results, be specific with your requirements, and always validate the outputs.
